BMS Display

Bentrol's BMS Display allows Building managers and owners to view building equipment in the form of animations at a glance and immediately observe building temperatures and alerts.

With options for custom screens such as current energy usage or floor plans, this display is here to make your job easier. This display will save you valuable time investigating issues and reduce the amount of call-out fees. The display also features a weather forecast.

Compatible systems include WebXL controllers and BACnet IP compatible controllers. Other Systems will be made available upon request.

Features

- View current Temperatures and building alerts
- Weather Forecast
- Options for custom screens such as current energy usage or floor plans.

Includes

- 40" Full High Definition TV*
- Setup of monitoring computer and components
- Configuration of vital equipment alerts

* Models pictured are not included in the package. TV size may change depending on availability (this will be discussed). Pricing is determined by complexity of order.

BMS Display Components

How it works

DD-100

The Digital Display (DD-100) sits neatly behind your TV and outputs your site's customised display screens.

BG-100

The BACnet Gateway (BG-100) connects to building equipment and extracts data, viewable on your BMS display. Models for other interfacing types will be created upon request.
